

Atlas des Odonates : zones peu ou non prospectées

Un certain nombre de mailles regroupent encore peu, voire pas d'observations de libellules. Elles mériteraient d'être prospectées afin de pallier les inégalités de prospection en région PACA et améliorer les connaissances pour le futur Atlas des Odonates.

Les secteurs à prioriser sont localisés sur les cartes suivantes, classées par département. Munissez-vous de vos cartes de randonnées ou des outils en ligne (Géoportail, Google Earth, etc.) afin de préparer vos futures prospections.

Si certaines zones ne sont pas assez visibles sur les cartes ou si vous hésitez sur une localisation, contactez Marion Menu (marion.menu@lpo.fr).
